Model:G100

Dear Customer:

Thank you for purchasing our products. Please read the User Guide carefully and keep this Guide in a proper manner. We shall assume no responsibility for any accident as a result of failure to violate the precautions and operating instructions stated in this manual.

Precautions:

- * Disassembly and modification must be performed by professional technicians.
- * Keep this product away from chemicals.
- * Do not shake this product vigorously.
- * Do not use this product in the areas those are exposed to optical radiation and thermal radiation.
- * Do not use this product during the movement of body.
- * Clean the glasses gently with clean and soft dedicated glass cleaning cloth; rubbing is not allowable.
- * Do not scratch, knock and collide the glasses with hard objects or rub them with various abrasive materials.

Technical Specification of 3D Glasses:

Product name: 3D Active Shutter Glasses

Weight: 48g

Working current: 5mA

Battery type: lithium-polymer battery

Carried standard: Q/02 RSR608-2010

Operating environment: working temperature 5-35°C

Working humidity: 20%-80% RH

Atmospheric pressure: 86kPa-106kPa

Identifying Controls:

The appearance of glasses shall be subject to change.

Basic Operation:**Turn on:**

Push the switch button forward and then align the infrared signal reception window on the glasses with the 3D TV (IR emitter) indicator light(blue light); "normally ON" stands for normal operation status.

Turn off:

Push the switch backward and the indicator lamp would go off (i.e. turn off). The operation of glasses would stop working in this case.

Note: in case the glasses receive no IR sync signals in 15 minutes, they would be turned off automatically. To active the glasses, turn the power switch of glasses off first, then turn on the power switch on, The glasses will work again.

Charging:

You may charge the battery in the glasses through mobile phone charger with MiniUSB charge port, The USB port of PC, or the USB port of television (this charging method is not recommended due to the high current of TV USB interface).

The indicator light (red) would be normally ON during the charging process and would go off upon the full of charging. The full charging of battery would take about 1.5 hours.

Troubleshooting:

1.The glasses fail to work even if the power switch has been set to the ON position.

- (1) Check if there is still some electricity energy in the battery;
- (2) Recheck if the indicator lamp is still blue, normally ON or flashes regularly after the power adaptor is connected.

2.The LED indicator lamp of glasses keeps flashing.

Check if the glasses have received sync signals. Please charge the Technical 3D Glasses before restart if the indicator lamp continues to flash near sync signal source.

3.The 3D effect of image is poor or abnormal.

Press the left-right-eye power switch of 3D sync IR transmitter to switch the eye status.

Packing list :

| NO. | Parts | Quantity |
|-----|---------------------------|----------|
| 1 | 3D Active Shutter Glasses | 1 |
| 2 | Nose clip | 3 |
| 3 | Glasses bag | 1 |
