

It's important that your rangehood has the right ducting system so 'dirty' air can be expelled outside. Uniduct® rangehood ducting systems have been developed to clear the air quickly and quietly. The kits are simple to install and designed to fit a wide variety of rangehoods.

RHUSSR150X

Soffit Ducting Kit

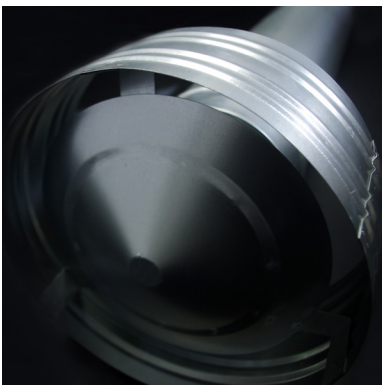

This kit is suitable for situations where it is desirable to duct rangehoods to the outside through the soffit via the ceiling or mid-floor cavity. The kit uses 150mm diameter semi rigid ducting, plus contains a 304 grade S/S outlet.

RHUTWSR150X

Wall Ducting Kit

This kit is suitable for situations where rangehoods are fixed to an external wall and can be ducted directly to the outside. The kit uses 150mm diameter semi rigid ducting, plus contains a 304 grade S/S outlet.

RHUHRS150X

Roof Ducting Kit

This kit is suitable for situations where rangehoods can be ducted vertically to the outside through the roof cavity. (A qualified plumber or roofer is recommended for installation of the cowl to meet building standards). The kit uses 150mm diameter rigid ducting, plus contains a galvanised steel roof cowl.
