 The image shows a white Winix Mini 4-Stage Air Purifier on a wooden surface. To the left is a small bowl and a book titled 'KINFOLK'. To the right is a lit candle. The purifier has a blue light on top. Text overlays include 'WINIX', '4-Stages of Filtration', 'Mesh Pre-Filter', 'Activated Carbon Filter', 'Hospital-Grade True HEPA Filter', and 'PlasmaWave® Ion Air Technology'. At the bottom, it says '4-Stage Filtration captures up to 99.97% of airborne particles' and lists 'Bacteria & Viruses', 'Mould Spores', 'Pollen & Dust', 'VOCs', and 'Odours & Smoke'.	Winix Mini 4-Stage delivers significantly cleaner air targeting microscopic particles and contaminants. Winix mini uses advanced multi-stage filter design to reduce airborne contaminants that drive allergies, odours, health complaints and contributes to poor quality sleep. Provide health and comfort for smaller spaces around the home such as the nursery, bedroom, study, office and wardrobes up to 29m2. WIINIX Minis whisper quiet and low cost operation.	https://digitalassets.cdbgroup.com/asset/1f36b745-645e-4f03-af78-3975530c4267/WXAP310-Info-Web-Assets.png

 The diagram shows the four stages of filtration for the Winix purifier. Stage 1: Washable Mesh Pre-Filter (catches large particles like dust, pet dander, pollen). Stage 2: Hospital-Grade True HEPA Filter (captures 99.97% of particles including dust mites, mould spores, bacteria, viruses). Stage 3: Advanced Carbon Filter (reduces VOCs and household odours from cooking, pets, smoke). Stage 4: PlasmaWave® Ion Air Cleaning Technology (binds toxic pollutants making them heavy enough to fall out of the air).	Enjoy multiple layers of air filtration technology to create a fresher-smelling home reducing exposure to airborne chemicals and pollutants. An activated carbon layer adsorbs cooking odours, volatile organic compounds and harmful gases. Hepa Filter is particularly beneficial for allergy and asthma sufferers while PlasmaWave filtration removes airborne particles for a fresher feel to your home. A Pre-Filter extends the life of the main filters, reduces maintenance and improves efficiency, all while capturing large dust, pet hair and fibre particles.	https://digitalassets.cdbgroup.com/asset/283dc421-1d31-47b3-b1d4-105c47a5d034/WXAP310-Web-Assets.png
