BiOSARi

MARBLE INFRARED HEATER

Efficient and economical thanks to the long-lasting heat storage function; the beautiful BioSari stand heater provides cozy warmth for cool days.

**NATURAL MARBLE EMITTING
30% MORE FAR INFRARED
THAN ANY OTHER TYPE OF
HEATING ELEMENTS**

MarboThermic® Technology

NATURAL MARBLE EMITTING 30% MORE FAR INFRARED THAN ANY OTHER TYPE OF HEATING ELEMENTS

Efficient and economical thanks to the long-lasting heat storage function: the BioSari Marble stand heater provides cozy warmth on cool days.

Marble is a natural stone with high energy density and excellent conductivity and is the best stone for absorbing large amounts of heat quickly.

'Storage' heaters have been around for a long time and were made from lightweight concrete and fire brick. Natural marble is far better than these two man-made materials at heating quickly and then storing the heat.

This is a breakthrough in portable heating technology. This heating features a slice of Mongolian marble cut into slices and polished to create the heating element with distinctive characteristics that have been demonstrated and praised by scientific studies. The wavelength of far infrared rays emitted by this marble element is the ideal one to make the human body feel comfortable.

The heater generates a super far infrared heat that continues to emit up to half an hour after turned off.

The natural marble heating element has unique features: Its molecules are able to release an incredible amount of far infrared energy at a temperature of 300 degrees.

The mobile heat storage unit for cool days. The BioSari Marble Infrared Heater is a compact, easy-to-operate electric heating system that heats up even when it has been switched off thanks to a highly efficient heat accumulator.

Soft sunshine-like warmth is supplied by the BioSari Marble Infrared Heater. The 1500 watt infrared heating element can be continuously adjusted in its temperature performance, and can thus be optimally adapted to individual heat requirements. The use of infrared technology ensures that the heater operates particularly quietly without any unnecessary fan noise, and therefore does not interfere with concentration or sleep. Particularly practical is the extremely efficient heat storage function of the BioSari Marble: a plate of genuine Mongolian marble is heated during operation, and the heat absorbed after the end of the operation is transferred to the surroundings for hours.

For a safe stance, the BioSari Marble heater has an extra-wide base stand. A practical carrying handle gives you mobility, and facilitates the transfer to any desired location. The modern design with brushed metal elements fits seamlessly into the home, office or clinic.

This makes it the most efficient heating device on the market today in terms of radiant heat emitted (30% more far infrared rays than any other type of heating elements).

MARBLE INFRARED HEATER

Features and Benefits

- ✓ Contemporary 'Apple-like' design
- ✓ Slimline
- ✓ Energy Efficient
- ✓ Emits far infrared heat therefore it doesn't require a fan - no noise
- ✓ Creates soft warm dry environment which is beneficial to health and wellbeing
- ✓ Doesn't cause 'wet' air which dust settles on
- ✓ Light indicator
- ✓ Over-heat protection
- ✓ Tip-over protection

MARBLE INFRARED HEATER

Main colour	Grey
Width	48 cm
Height	67 cm
Length / depth	25 cm
Cable length	1.8 m
Weight	11.3 kg
Product Type	Infrared Radiant Heater
Material	Aluminium
Power	1500 watt
Construction type	Freestanding
Special features	Adjustable temperature, Infrared
Power supply	220-240V~ / 50-60Hz
