

CI905DTB1

90cm Touch Control Induction Cooktop

Traditionally we cook by generating heat from one source, such as a flame, and conducting it to another. The Fisher & Paykel Induction Cooktops work on a different principle. The cooktop itself produces electromagnetic vibrations, which induce the pot or pan to generate its own heat. The results are shorter heat-up times, greater precision and a safer cooking surface.

Features & Benefits

Precise Control
Fisher & Paykel induction cooktops offer extremely accurate, consistent temperature control from very high to very low heats, so you can sear, sauté and temper like a pro.
Instant Response
Go from a boil to a simmer in seconds. Fisher & Paykel Touch&Slide controls react immediately when you adjust the temperature so you don't waste time in the kitchen.
Easy Cleaning
The surface around your cookware stays cool when you cook, preventing baked-on spills and making cleaning up a breeze. The durable ceramic cooktop surface just needs a quick wipe after use to maintain its good looks.

Superior Efficiency
No heat is wasted during induction cooking because only the cookware is heated, not the cooktop surface. This makes induction cooking more energy-efficient than electric or gas cooktops.

Enhanced Features
PowerBoost and GentleHeat deliver either very high or very low heat fast for specialised cooking tasks such as searing meat and melting chocolate. An integrated timer keeps you on track.

Safer Choice
Induction cooktops only start heating your pot or pan once you've placed it on the ceramic surface and stop as soon as you remove it – so you don't have to worry about curious little fingers or leaving an element on.

Specifications

Cleaning	•
Flat easy clean glass surface
