

DH8060P1

8 kg Heatpump Condensing Dryer

This extra large capacity condensing dryer with Heat Pump Technology is highly efficient, has a 6 star energy rating and dries at lower temperatures for better clothes care. Installation is simple. Just plug it in anywhere as no venting is required.

Features & Benefits

Heat Pump Technology

Instead of heating air in the dryer drum with an element, this dryer uses an energy efficient heat pump to create heat to dry the clothes. Instead of just pumping the hot air out, it is pumped into an evaporator, where it is dehumidified and the warm air is returned to the drum. It is a closed loop circuit that offers typical electricity savings of 40-60% compared to a good quality condensing or vented dryer.

Better Clothes care

Because the Heat pump dryer uses an energy efficient heat exchange system, the air temperature inside the drum is considerably lower than a conventional dryer. Using a lower temperature to dry the load means your clothes are dried gently with less shrinkage. It may take a little longer, but the results speak for themselves.

Easy Installation

Installation is easy as no venting is required. If you want to drain the moisture from your dryer automatically, rather than use the tank, a hose is provided that can fit into your washer standpipe.

Internal Drum Light

An internal drum light insures you can see that last sock.
