If there is a problem?

PROBLEM	POSSIBLE CAUSE	SOLUTION
Water drips from the soleplate in the soleplate.	The chosen temperature is too low and does not allow for the formation of steam.	Position the thermostat in the steam range (from ●● to MAX).
	You are using steam while the iron is not hot enough.	Wait until the thermostat light goes out.
	You are using the Shot of Steam button too often.	Wait a few seconds between each use of the button.
	There is too much steam.	Reduce the steam.
	You have stored the iron horizontally, without emptying it and without setting it to ●.	See the section "Storing your iron".
The iron drips when you start ironing.	You have removed the anti-scale rod to fill your iron.	Do not extract the anti-scale valve when filling the iron.
Brown streaks come through the holes in the soleplate and stain the linen.	You are using chemical descaling agents.	Do not add any descaling agents to the water in the water tank.
	You are not using the right type of water.	Perform a self-cleaning operation and consult the chapter "What water should I use?".
	Fabric fibres have accumulated in the holes of the soleplate and are burning.	Perform the self-cleaning operation and clean the soleplate with a damp sponge. Vacuum the holes of the soleplate from time to time.
The soleplate is dirty or brown and/or stain the linen.	Your linen has not been rinsed sufficiently or you have ironed a new garment before washing it.	Make sure that your laundry is rinsed sufficiently so as to remove any deposits of soap or chemical products on new clothes.
	You are ironing with an inappropriate program (temperature too high).	Clean the soleplate as indicated above. Select the appropriate program.
	You are using starch.	Clean the soleplate as indicated above. Always spray starch onto the reverse side of the fabric to be ironed.
There is little or no steam.	The water tank is empty.	Fill it.
	The anti-scale valve is dirty.	Clean the anti-scale valve.
	Your iron has a build-up of scale.	Clean the anti-scale valve and carry out a self-clean.
	Your iron has been used dry for too long.	Carry out a self-clean.
The soleplate is scratched or damaged.	You have placed your iron flat on a metallic rest-plate or ironed over a zip.	Always set your iron on its heel. Do not iron over zips.
Steam or water come from the iron as you finish filling the tank.	The steam control is not set to the ● position.	Check that the steam control is set to the ● position.
	The water tank is overfilled.	Never exceed the Max level.
The spray does not spray.	The water tank is not filled enough.	Fill up the water tank.

If you have any problem or queries, please contact our Customer Relations team first for expert help and advice.
