The Thermostat Controls

Your bar fridge has one control for regulating the temperature. The temperature control is located on the upper wall of your bar fridge interior, visible only when the door is open.

The dial positions are as follows;

- 'Off' deactivates the bar fridge's power supply
- 'Min' provides a moderately cool temperature
- 'Med' is suitable for normal everyday operation
- 'Max' provides the coldest temperature setting; recommended for use during hot Summer days

Installation Tips

- When starting up for the first time, keep the bar fridge upright for 2 hours before connecting it to a power supply.
- When you install your appliance, set the thermostat knob to 'Med' for the first 24–48 hours, after which you can set it to the level that best suits your needs. It is best to wait 24 hours before adding food or beverages.

Please refer to your user manual pages 10–12 for detailed installation instructions.
