

# D9864E

## PRODUCT OVERVIEW

Product group:	Tumble dryer
Installation type:	Freestanding
Line:	Superior Line
Type:	Condenser Tumble Dryer
Capacity:	1 – 9 kg
Number of programs:	27 programs

## EFFICIENCY

IonTech technology

TwinAir

Heat pump

Drum Volume: 120lt

Drum illumination with LED light

35 cm porthole diameter

180 ° door opening angle

Reversible drum action

Direct discharge of condensate AutoDrain

Energy  
Rating

## FUNCTIONS

Lower drying temperature: 40°C-60°C

Anticrease

## CONTROL

Personal settings for all programmes

LCD Display

## SENSORIQ TECHNOLOGY

Humidity sensor

Service diagnostic indicator

## PROGRAMS

27 programs

Cotton, Synthetics, Delicates, Mix,

Wool, XL programme

SteamTech

## SAFETY AND DURABILITY

Protective thermostat

Automatic switch off when door is open

Child protection (CDP)

Stainless steel inner/outer drum

## FEATURES

Audio signal SoftSound

Basket for drying

FiltrationSupreme

Drying phase indicator

Signal for "full water container"

Remaining time on display

Vacuum feet

## TECHNICAL DATA:

Product Dimensions (HxWxD): 85 x 60 x 60 cm

Electrical cord length: 150cm

Gross weight: 54kg

Noise level (max): 65 dB(A) re 1pW

Energy consumption: 291 kWh

EAN Code: 3838942993626

### Unique fibre treatment with the IonTech technology

Our premium model features a unique air ionizer which additionally smooths fabric fibres, eliminating the creases and the static charge accumulated during the drying process.

It effectively removes unpleasant odours from the laundry, such as food and tobacco smoke, and refreshes it along with making it softer.

### TwinAir, effective laundry drying

Evenly dried laundry. Condenser dryers with a heat pump boast a unique air blowing system. During bi-directional rotation, it allows evenly intensive introduction of warm, dry air into the drum through both air channels. The path of the air is adjusted to the rotation of the drum, providing a constant drying intensity throughout the drying cycle. Evenly distributed, the laundry will not tangle and the final result will be perfect.

### SteamTech – perfection without ironing

Exceptionally economical drying.

Condenser dryer with a heat pump dries the laundry at a lower temperature than the conventional models, which additionally preserves the clothes. It is the only home appliance to use both the cooling and the heating part of the heat pump. Full use leads to reduction in energy consumption relative to the 6 star energy rating.

### XL programme

A special programme featuring reversible drum rotation prevents the laundry from entangling during drying.

The most efficient way to dry larger pieces of laundry! A special programme featuring reversible drum rotation prevents the laundry from entangling during drying. The XL program will dry larger items such as bedding, blankets, pillows, etc. more evenly and with substantially less creases.

### AutoDrain - direct discharge of condensate

No more manual emptying of the condensate tank. If you opt for a condenser dryer instead of the vented dryer, the opening for discharging the vapours from the room is no longer required. In this type of dryer, the steam condenses in a special condensate tank which is simply emptied after each drying cycle. If the condensate tank is connected to a drain through the AutoDrain pipe, the tank no longer has to be emptied manually.

## **SteamTech – perfection without ironing**

Perfectly smooth and fresh laundry.

New technology in laundry care employs steam to straighten every crease and wrinkle. Ironing your cotton and mixed fabric laundry will now be much easier – or even not required at all! An independent remarkable steam drying programme for shirts will particularly please those who strongly dislike ironing. Simply place up to five clean shirts into the dryer; it will take only 20 minutes to dry them and remove all creases using steam. Refreshment programme is perfect for clothes that have recently been worn but are not ready for washing yet, or clothes that have been in the closet for a while. It will remove any unpleasant odour and make them soft, without washing.

## **Anti-Crease system to minimise ironing**

Anti-Crease system reduces creasing during drying; hence, less ironing is required.

Gorenje dryers feature an Anti-Crease system designed to reduce creasing. The tumble action and special 3D rib design prevent the garments from getting tangled or bundled up, which results in improved drying efficiency. A 10 minute period at the end of the drying cycle slowly cools down the laundry load to further reduce the possibility of creasing. Even when the dryer cannot be emptied immediately, your garments will not settle or crease by virtue of automatic, periodic tumbling of the load for a minimum of one hour after the cycle has finished.

## **Special rack for woollens or sport shoes**

A specially designed rack for delicate woollen items can be mounted onto the drum of the dryer. Just spread your sweater across the rack and the wool will remain soft and fluffy. The rack can also be used to dry sport shoes as it keeps them from bouncing around inside the dryer. This also considerably shortens the drying process compared to just hanging items out to dry.

## **FiltrationSupreme**

Gorenje tumble dryer features 40 % higher filtration efficiency due to optimal position and size of filters. Due to optimal humidity level and temperature, tumble dryer's door is the most suitable position for filter since most of the particles linger in the door area.

## **Child Protection**

The appliance control panel can be locked by simply pressing a button or a combination of buttons.

The door cannot be open during the wash cycle and Premium models feature UltraCoolDoor (UCD) - a second plastic cover to guard from the hot inner door glass. Additionally, the control panel can be locked by simply pressing a button.
