Introducing your new

60cm Built-In Oven

Before First Use

When your oven is switched on for the first time, it may give off an unpleasant smell. This smell is completely normal, and is due to the oven's manufacturing process.

To remove the smell, we recommend that you set the temperature to the highest setting with the Fan Forced function selected. Ensure that the oven is completely empty, and that the door has been firmly shut.

Run the program for 90 minutes, then turn the oven off. After the oven has cooled down, allow the door to be opened at a 45° angle to allow for further ventilation.
