

## Smart, helpful and friendly

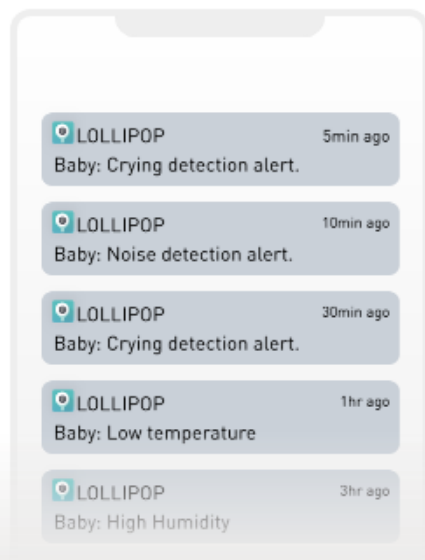

The Lollipop supports parents from newborn days to toddler playtime.

## Crisp daytime images. Powerful night vision.

Our infrared LED lens gives you a clear view during the night because what happens in the dark is just as important. And just as adorable.

## Instant app alerts for peace of mind

Decide which notifications get sent to your smartphone, then view the live feed or event videos to see what's going on.

True Crying Detection

Humidity Detection

Noise Detection

Temperature Detection

Crossing Detection

Air Quality Detection

## Live View

Curious what's happening in baby's world? Look at the Lollipop live feed on your tablet or smartphone check on baby from anywhere you are.

## Smart Home Device Integration

Now you can connect your Lollipop camera to smart home devices and make your parenting life easier!

Access your Lollipop Baby Camera with simple voice commands. You can watch live view, play music, request recent events, monitor your baby's status, and get things done without having to navigate through the app.

[Enable Amazon Alexa Skill Now](#)

[Enable Google Assistant Action Now](#)

## Multi-Streaming

In our Lollipop app we provide multi-streaming with up to four cameras at the same time. Should you have more than one baby to watch out, no worries, we've got it all covered!

## Background Play

Turn on the background play feature and the Lollipop works like a traditional sound monitor. It's perfect for overnight monitoring if your baby sleeps in another room, or for listening in on quiet playtime.

\*Camera and mobile devices MUST be connected to the same Wi-Fi.

## Privacy Mode

Activate the "Privacy Mode" setting when you're connected to your home's Wi-Fi network so your camera's data isn't uploaded to our cloud. For added security, always make sure your Lollipop's firmware is up-to-date and your wifi password is long and hard to guess.
