70L Capacity
Dual Cook Oven

Twin Convection

Twin Convection technology gives you ultimate control with upper and lower cooking zones that can be used alone or together – allowing you to cook two meals at different temperatures at the same time.

Ceramic Enamel Interior

Ceramic enamel is a non stick and scratch resistant surface. It also has an anti bacterial coating so that bacteria and food particles can be wiped away when you are cleaning your oven.

Catalytic Cleaning

A plate on the back wall of the Oven collects and dissolves grease and residue allowing you to simply wipe and clean away the offending mess.

PRO ROASTING

Master professional techniques with Pro-Roasting Mode, which sears and seals in juices before cooking. This two-step process first engages the top heater and convection fan to sear food, then cooks it at a pre-selected lower temperature

Twin LED Display

The dual digital displays highlights oven settings and cooking information so that you can monitor your meals as they cook.

Triple Glazed Door

Triple layer glass door maintains the internal temperature while keeping the external door temperature cooler

70L net internal capacity

With its divider removed, no dish is too large for the NEO Twin Oven. When in single mode there is enough room for the largest of family roasts.
