

The Right Choice For Your Home

Refrigerator Range

SHARP

The Right Choice for your Home

Kitchens have become the central hub in the home. In many modern homes, the kitchen is an extension of the family living area allowing family and friends to relax and enjoy entertaining together.

Sharp pride itself on providing fundamental user-friendly products using premium materials throughout the refrigerator range to provide a quality, stylish appearance and also ease of use. With various finishes available you can select from many colours including a glamorous Glass, High Gloss Steel or Classic finish. There is something that best suits any kitchen.

With more than just good looks, the Sharp refrigerator range has the innovative technology to perform, including Sharp's J-Tech Inverter, Plasmacluster Ion technology and Nano deodorising systems. Selected models also display an elegant touch control panel, positioned on the front exterior, allowing easy access to control and select a variety of features to suit any lifestyle.

French Door

The four door French range offers stylish large interiors while occupying less space when opened with the unique opening mechanism. Most food items can be accessed by opening only one door which reduces the amount of chilled air which can escape, reducing energy consumption.

The internal capacity is not a problem with the partition free design offering wide shelf space to accommodate large party-size cakes and hors d'oeuvre platters.

Top Mount

The conventional Top Mount is the most traditional style refrigerator. Sharp's range offers a diverse capacity selection ensuring the right size is available for a couple through to a large family. With many spacious sized door pockets and adjustable shelves, many different sized items can be accommodated, from small condiments to large bottles.

* Features may vary depending on model

Japan Technology

J-Tech Inverter

J-TECH INVERTER

Sharp's **J-Tech Inverter** refrigerator models are extremely efficient using a controlled, gradual 36 step compressor rotation in accordance with the usage of the refrigerator providing high performance and advanced temperature control. The Japanese Inverter technology provides lower energy consumption, even internal temperature, faster freezing and quiet operation.

The J-Tech Inverter also supports additional features including the **Extra Cool** and **Express Freeze** functions. By selecting the **Extra Cool** setting, drinks and fruit items can be thoroughly chilled to 0-2°C without freezing in the **Extra Cool compartments** for up to 6 hours. The 2 hour **Express Freeze** function assists with speeding the freeze time of fresh foods and increasing the ice making time by up to 35%. These modes will automatically end after the operation time.

Plasmacluster Ion

The Sharp patent **Plasmacluster Ion Technology** is effective in reducing airborne bacteria and mould spores. Releasing positive and negative ions from vents inside the refrigerator cavity, these surround the cell membrane to help reduce cell reproduction. The result is a longer lasting freshness of the food in the refrigerator.

Keeping It Fresh

As well as the effectiveness of Plasmacluster Ion technology, Sharp also combine an efficient deodorising and cooling system to keep food fresher for longer.

Sharp's Hybrid Cooling system acts as a barrier and slows down the airflow whilst maintaining a cold surface. This helps to reduce moisture removal to prevent overcooling, temperature fluctuations and excessive dryness.

Sharp's in-built AG+ Nano and AG CU Nano Deodoriser systems contain nano-sized molecules designed to trap odour molecules when air passes through the filter. The deodoriser also prevents transmission of odours between food items and keeps cooled air clean and bacteria-free.

Innovative Solutions

The advanced LED Touch Control panel allows easy access to the refrigerator modes for temperature control and temperature rise indicator, vacation mode, child lock, energy save mode and express freezing.

Sharp's French Door range features the Unique Opening mechanism technology. This allows the doors to slide smoothly sideways when opened and closed as no mullion is required and friction between the doors is eliminated, creating the perfect seal.

ECO mode reduces the power consumption by setting the inside temperature higher than the preset temperature by approximately 1°C (refrigerator) and 2°C (freezer).

* Efficiency of power saving will depend on the usage environment (controlling temp, ambient temp, frequency of use and amount of food items).

* Features may vary depending on model

Glass French Door Range

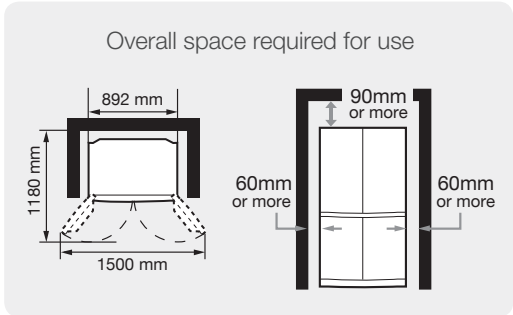

SJFJ676VBK

SJFJ676VWH

With a shimmering flat glass exterior, this simply elegant design is sure to complement any kitchen.

The frameless glass design makes for easy cleaning and offers high resistance towards scratches and dents.
