Lighting	2 x lights
Supplied accessories	frothing nozzle for cappuccino adjustable coffee dispenser drip tray
Safety	no
Power	1350W, 10A, 3-pin plug
Warranty	Two years parts and labour

## PROFESSIONAL RESULTS

The Smeg built-in compact coffee machine, completely automatic and very simple to use, is perfect for preparing delicious coffee and cappuccino, just like the hot drinks that you would enjoy in a coffee shop, yet from the comfort of your own home.

## EASE OF USE

The new CMSC45 from Smeg has an LCD display that clearly and intuitively supplies multilingual information. Coffee can be prepared using either beans or ground coffee and it is possible to prepare one or two cups at the same time. With the steam function, milk or cappuccino can be prepared with a generous topping of foam, and there is a hot water function for tea and other hot drinks. The useful rinsing function can be employed to clean the machine after use or to heat the cups before pouring a coffee, a technique used by connoisseurs to exalt the aroma and taste of the coffee.

## VERSATILITY

The Smeg coffee machine is extremely versatile, allowing you to prepare different strength coffees (from extra-mild, to mild, medium, strong, or extra-strong) and quantities (from espresso, to medium and long). Even the temperature of the coffee can be regulated on three different levels so that you can customise it completely to your personal tastes.

## MAINTENANCE

The CMSC45 automatically carries out a rinsing and a descaling operation every time it is switched on or off. It can be easily programmed to switch itself on – meaning that the machine will be ready, for example, in the morning for you to immediately prepare a fresh coffee as soon as you get up, whilst the stand-by function allows you to save energy.

It includes a removable water container, a container for coffee beans, a separate compartment for ground coffee and a drawer for the grinds (used coffee). It also has two lights, telescopic guide rails for ergonomic access to the coffee container and can be adjusted for different height cups. A water connection is not necessary for a Smeg coffee machine meaning that it is possible to connect the coffee machine anywhere in the kitchen.
