CONGRATULATIONS

Congratulations and thank you for choosing our refrigerator/freezer. We are sure you will find your new appliance a pleasure to use. Before you use the appliance, we recommend that you read through the relevant sections of this manual, which provides a description of your appliance and its functions.

To avoid the risks that are always present when you use an electric appliance, it is important that the appliance is installed correctly and that you read the safety instructions carefully to avoid misuse and hazards.

We recommend that you keep this instruction booklet for future reference and pass it on to any future owners.

After unpacking the appliance, please check it is not damaged. If in doubt, do not use the appliance but contact your local customer care centre.

TIPS & INFORMATION

IMPORTANT – CHECK FOR ANY DAMAGES OR MARKS. If you find the refrigerator is damaged or marked, you must report it within 7 days if you wish to claim for damage/ marks under the manufacturers warranty. This does not affect your statutory rights.

ENVIRONMENTAL TIPS

INFORMATION ON DISPOSAL FOR USERS
- Most of the packing materials are recyclable. Please dispose of those materials through your local recycling depot or by placing them in appropriate collection containers.
- If you wish to discard this product, please contact your local authorities and ask for the correct method of disposal.

IMPORTANT SAFETY INSTRUCTIONS

Please read the user manual carefully and store in a handy place for later reference. The symbols you will see in this booklet have these meanings:

⚠️ WARNING
This symbol indicates information concerning your personal safety

⚠️ CAUTION
This symbol indicates information on how to avoid damaging the appliance

💡 TIPS & INFORMATION
This symbol indicates tips and information about use of the appliance

🔍 ENVIRONMENTAL TIPS
This symbol indicates tips and information about economical and ecological use of the appliance

Meanings of symbols used in this manual are shown below:

🚫 This symbol indicates never to do this
✅ This symbol indicates always do this

⚠️ WARNING
STABILITY FOOT
When your refrigerator is in place, wind down the stability foot to the floor to stabilise it. Lift the front of the refrigerator to take the weight off the stability foot, then turn it ¼ turn further to ensure firm contact with the floor. If you do move the refrigerator, remember to wind it back up, to allow the refrigerator to roll. Remember to reset it when reinstalling.

⚠️ WARNING
Never unplug the refrigerator by pulling the electrical cord as this may damage it. Grip the plug firmly and pull straight out.

Choose a location for your refrigerator that isn’t too cold.
The ambient room temperature should be above 10°C.

Stand your refrigerator in a dry place – avoid areas of high moisture or humidity.

Don’t locate the refrigerator near stoves, fires or heaters.

When installed correctly, your refrigerator should:
- Have adequate space at the back and sides for air circulation (refer to page 8).
- Be aligned to the surrounding cupboards.
- Have doors that will self-close from a partially open position.

⚠️ R600A REFRIGERANT WARNING
This appliance contains a small quantity of environmentally friendly, but flammable, non-synthetic R600a refrigerant:
- Ensure that the tubing of the refrigerant circuit is not damaged during transportation and installation.
- Leaking refrigerant may cause eye injuries or ignite.

The room for installing appliance must be at least 1 m³ per 8g of refrigerant. The amount of refrigerant in the appliance can be found on the rating plate inside the appliance.
TOP MOUNT (TM) REFRIGERATOR FEATURES

1. Freezer light (where fitted)
2. Freezer air delivery vents
3. Glass freezer shelf
4. Twist & Serve ice cube tray and bin
5. Freezer air return vents
6. Refrigerator light
7. Manual temperature controls (where fitted, not illustrated)

8. Electronic temperature controls (where fitted, not illustrated)
9. Deli bin
10. Adjustable glass shelves
11. Bottle/wine rack
12. Humidity controls
13. Crisper bins on telescopic extension slides
14. Adjustable rollers

15. Freezer door bins
16. Twin dairy compartments
17. Storesafe™ bin (lockable)
18. Utility drawer
19. Egg tray
20. Adjustable door bins
21. Bottle/can bins
22. Stabilising foot

Features may vary depending on model. Not all models will have features listed.
Refrigerator light
2 Electronic temperature controls
(Where fitted. Not illustrated)
3 Manual temperature controls
(Where fitted. Not illustrated)
4 Adjustable glass shelves
5 Bottle/wine rack
6 Humidity controls
7 Crisper bins on telescopic extension slides
8 Freezer storage tray
9 Twist & Serve ice cube tray
10 Ice bucket and scoop (inside drawer, not illustrated)
11 Freezer drawers on telescopic extension slides
12 Adjustable rollers
13 Twin dairy compartments
14 Storesafe™ bin (lockable)
15 Egg tray
16 Adjustable door bins
17 Bottle/can bins
18 Stabilising foot

Features may vary depending on model. Not all models will have features listed.
SINGLE DOOR ALL REFRIGERATOR (AR) FEATURES

1. Refrigerator light
2. Temperature control
3. Adjustable glass shelves
4. Deli bin
5. Bottle holder
6. Humidity control
7. Crisper bin on telescopic extension slides
8. Adjustable rollers
9. Twin dairy compartments
10. Storesafe™ bin (lockable)
11. Egg tray
12. Adjustable door bins
13. Bottle bins
14. Can bin
15. Stabilising foot

Features may vary depending on model. Not all models will have features listed.
SINGLE DOOR ALL FREEZER (AF) FEATURES

1 Temperature control
2 Freezer light
3 Twist & Serve ice cube tray and bin
4 Adjustable glass shelves
5 Freezer bins on telescopic extension slides
6 Adjustable rollers
7 Stabilising foot

Features may vary depending on model. Not all models will have features listed.
INSTALLING YOUR NEW APPLIANCE

ADEQUATE VENTILATION AROUND YOUR REFRIGERATOR.
The diagram below shows the recommended airspace to allow for ventilation of your refrigerator. If you don’t have a cupboard with a rear gap, the recommended clearance area on top increases from 50mm to 90mm (x) and from 32mm to 72mm (y). When positioned in a corner area, spacing of at least 3.50mm on the hinge side will allow the doors to open enough to enable the removal of bins and shelves.

Note: For those models with telescopic extension slide-out bins, the clearance required increases from 350mm to 550mm for top mount and bottom mount models, and to 450mm for the all refrigerator model to allow full access to the bins’ contents as well as bin removal.

NOTE:
Doors are designed to sit proud of cabinetry (not flush). The clearances shown above are the recommended minimum clearances. The clearance at the rear must not exceed 75mm.

INSTALLING YOUR REFRIGERATOR
Your new refrigerator should arrive with the front adjustable rollers wound down, to tilt the top backwards by about 10mm from upright. This will allow your refrigerator door to self-close, providing a consistent closed seal.

The stability foot should also be wound fully up so it will not interfere with the operation of the rollers (see diagram in Step 3).

1. Roll the refrigerator into place.
2. The top of the refrigerator should be tilted back by 10mm (see diagram on left). This will allow the doors to self-close providing a consistent door seal.
3. If the refrigerator isn’t tilted back, you can adjust the two front rollers by turning the large, plastic roller nut (see diagram below). One turn of the nut increases the height of the refrigerator by 10mm. If you have difficulty turning the roller nut, have someone tilt the refrigerator back, so you have better access. Alternatively, you can access the rollers from the side, using a flat screwdriver. (See diagram below).

4. Check the alignment of the refrigerator to the surrounding cupboards to see if it is level. You can adjust the level with the rollers as detailed in step 3.

5. If you find your refrigerator rocks from corner to corner, it means your floor is uneven. Find a piece of plastic or hardboard etc. and pack it firmly under the roller.
6. On certain floor surfaces the refrigerator may roll forward during operation. A “Roller Stop”, which is provided, can be placed under the front rollers.

7. You may now need to fine-tune the installation by repeating Steps 3, 4 and 5.

CAUTION
The rollers are designed for forward or backward movement only. They are not castors. Moving the refrigerator sideways may damage your floor and the rollers.
INITIAL START-UP

8. When you have the appliance in its final position, it needs to be stabilised. Wind the stability foot down to the floor until it just makes contact with the floor. Lift the front of the appliance to take the weight off the stability foot, then turn it ¼ turn further to ensure firm contact with the floor. Whenever you need to move the appliance, be sure to wind the foot back up so that the appliance can roll freely and be sure to reset it when reinstalling.

9. Clean your refrigerator thoroughly following the instructions on page 16 and wipe off any dust that has accumulated during shipping.

10. Plug your refrigerator straight into its own power point and never use a double adapter. If you need to roll the refrigerator to get to the plug, remember to raise the stability foot first.

11. Before you put any food in your refrigerator, it’s recommended you leave it on for 2 or 3 hours to check it is running properly.

Congratulations! You have successfully installed your new refrigerator.

Refrigerators work by transferring heat from the food inside to the outside air. This operation makes the back and sides of the refrigerator (particularly at startup) feel warm – which is normal.

A cooling coil is located behind the rear wall of the freezer section (in top mount, bottom mount and freezer models) and behind the crisper in the all-refrigerator models. This coil cools and removes moisture from the air inside.

Avoid placing food against the air vents in the refrigerator, as it affects the efficient circulation. If the door is opened frequently, a light frosting will occasionally occur on the freezer’s interior. This is normal and will clear after a few days. If the freezer door is accidentally kept open, a heavy frost will coat the inside walls and should be removed.

Your new refrigerator uses a high-speed compressor, along with other energy-efficient components, which may make unusual sounds. These sounds simply indicate your refrigerator is working how it should. They include:
- Compressor running noises;
- Air movement noise from the small fan motor;
- A gurgling sound, similar to water boiling;
- A popping noise, heard during automatic defrosting; and
- A clicking noise, prior to compressor start-up.

Further details can be found on page 17.

TIPS & INFORMATION

• For top mount refrigerators. (Where the freezer is on top of the fresh food compartment)
  – Don’t place food forward of the ribs on the freezer floor, as it will keep the door open.

• For bottom mount refrigerators (where the freezer is below the fresh food compartment), single door refrigerators and single door vertical freezers.
  – Ensure all freezer drawers and shelves are pushed back completely to prevent them from keeping the door open.
ELECTRONIC CONTROLS

ELECTRONIC DISPLAY CONTROLS – ELECTRONIC MODELS

The LCD panel has a blue backlight and 6 touch buttons. It also contains an infrared light sensor, which turns the lights in the fresh food section on and off. When the power is first turned on, you will see the default settings, with the backlighting on.

CONTROLLING THE TEMPERATURE

The default temperature for the refrigerator is 3°C and -18°C for the freezer. If you want to change the temperature, follow the instructions below. Make only small adjustments and wait 24 hours to see if it’s correct. Checking the softness of ice cream is a good indication if your freezer is the right temperature, while feeling the coldness of water kept in the refrigerator is a good way of checking the temperature of the food compartment.

NOTE:
When you set a temperature, you set an average temperature for the whole refrigerator cabinet. Temperatures inside each compartment may vary, depending on how much food you store and where you place it. High or low room temperature may also affect the actual temperature inside the refrigerator.

CHANGING THE FREEZER TEMPERATURE

Press the freezer button to make the freezer colder in 1°C steps. Once the maximum of -23°C is reached, the display will return to -14°C with the next press of the button. The bar graph gets smaller with colder freezer settings.

CHANGING THE REFRIGERATOR TEMPERATURE

Press the fridge button to make the refrigerator colder in 1°C steps. Once 0°C is reached, the display will return to 7°C with the next button press. The bar graph gets smaller with colder refrigerator settings.

QUICK FREEZE FUNCTION

Use the quick freeze function when you add a large amount of food to the freezer compartment. This freezes the food quickly but does not affect the temperature in the refrigerator compartment. To use this function, press the quick freeze button once. An animated icon will light up. The quick freeze function will now operate for 90 minutes. If you want to turn the quick freeze function off before 90 minutes have passed, simply press the quick freeze button again. The icon will disappear and the freezer will return to normal operation.

FREEZER TEMPERATURE ALARM

If the alarm sounds for no apparent reason, check whether anything is keeping the door open. If the freezer becomes too warm due to the freezer door being left open or warm food being placed too close to the temperature sensor, a buzzer will sound. The icon adjacent to the alarm reset button, the freezer set temperature and bar graph will all flash, until the alarm reset button is pressed. Once pressed, the alarm disable icon adjacent to the alarm button will illuminate for 50 minutes, or until the temperature drops to an acceptable level.

Make sure nothing is holding the freezer door open and move any warm food away from the temperature sensor. If the freezer is still too warm after 50 minutes, the alarm will sound again, indicating that something may be wrong with the refrigerator.

NOTE:
The freezer temperature alarm can be reset for 1.2 hours by pressing the alarm reset button continuously for 10 seconds.

DOOR ALARM

If the fridge door is left open for more than two minutes, the alarm will buzz and an arrow pointing to an open door will flash, along with the temperature setting and bar graph. If you want to leave the door open while you load the refrigerator, you can turn the alarm off for 8 minutes by pressing the alarm reset button.

CHILD LOCK

Press and hold the freezer and fridge buttons together to activate the child lock. This will disable the display to prevent accidental changes to settings. To turn the child lock off, press and hold the freezer and fridge buttons together.

DRINKS CHILL TIMER

The drinks chill timer is used to quickly chill a bottle. Place the bottle in the freezer and the timer can be set for a minimum of 5 minutes to a maximum of 30 minutes. To set, simply press the drinks chill button repeatedly for the number of minutes (in 5-minute intervals). Once set, an animated icon appears beside the drinks chill button, with a timer that counts down one minute at a time. You can change the time or turn the timer off even after the countdown has started. A buzzer will tell you when the time is finished and the icon will flash until the alarm reset button is pressed.

If your drink is not cold enough, reset the drinks chill function (remembering the drink is already partially chilled).
**Suggested chilling times:**
- 10 minutes for cans of drink
- 20 minutes for bottles of wine
- 30 minutes for bottles of soft drink.

**ENERGY EFFICIENCY**
Your refrigerator has been designed to be energy-efficient and can operate in three modes: Normal, Eco and Holiday.

**Normal mode**
Normal mode is used when the refrigerator door is often opened. It’s the default mode of your refrigerator.

**Eco mode**
Eco mode can be used if you don’t open your refrigerator door a lot. It is activated in one of two ways:
- by manually pressing the eco/holiday button once when in normal mode, or,
- by automatically activates after 30 hours if the refrigerator door has not been opened.

The leaf icon will appear on the electronic display when eco mode is on. If eco mode is activated automatically, the refrigerator will revert to normal mode once the refrigerator door is opened.
If eco mode is entered manually, opening the door will not revert it back to normal mode. To exit eco mode, simply press the eco/holiday button until the word “normal” is displayed.
Use Eco mode when you’re not using the refrigerator all the time (e.g., as a long-term storage refrigerator). If the door is going to be opened a lot, switch back to normal mode. Remember, if eco mode is turned on manually, it won’t switch off automatically.

**Holiday mode**
Use this button when you go on holiday or leave the house for long periods. The refrigerator minimises defrosting to save energy but maintains your temperature settings. To put the refrigerator into holiday mode, press the eco/holiday mode button until the aeroplane icon appears. The holiday mode will operate until the button is pressed again or the refrigerator door is opened.

**NOTE:**
Opening the freezer door won’t effect the operation of either Eco or Holiday modes.

Eco and Holiday Modes minimise defrosting to save energy, while maintaining your temperature settings.

**OTHER SPECIAL REFRIGERATOR FEATURES (ELECTRONIC MODELS ONLY)**
- Independent control of the compressor and fan to provide the best performance.
- Extra cooling depending on the number of times the door is opened.
- Automatic defrost when the door is not frequently opened.
- 90-second memory display back-up to prevent the loss of settings during short power interruptions.
- Blue feature lighting activated when the door is opened.

**NOTE:**
Display malfunctions may be due to brief power supply interruptions. If this occurs, turn the refrigerator off at the power point and wait 5 minutes. The refrigerator pressure will need time to equalise before you turn the refrigerator on again.
MANUAL (ROTARY) CONTROLS – MANUAL MODELS

CONTROLLING THE TEMPERATURE
Only make small temperature adjustments at first and wait 24 hours to see if you need to make any more.

Top Mount Models
Use the temperature controls at the rear of the refrigerator compartment. Set refrigerator and freezer controls to MID at start-up.

- Adjusting the freezer temperature:
  1. Select the freezer control (top knob).
  2. Turn clockwise to set colder.
  3. Turn anti-clockwise to set less cold.

- Adjusting the refrigerator temperature:
  1. Select the refrigerator control (bottom knob).
  2. Turn clockwise to set colder.
  3. Turn anti-clockwise to set less cold.

Bottom Mount Models
Use the temperature controls at the rear of the refrigerator compartment. Set refrigerator and freezer controls to MID at start-up.

- Adjusting the refrigerator temperature:
  1. Select the refrigerator control (top knob).
  2. Turn clockwise to set colder.
  3. Turn anti-clockwise to set less cold.

- Adjusting the freezer temperature:
  1. Select the freezer control (bottom knob).
  2. Turn clockwise to set colder.
  3. Turn anti-clockwise to set less cold.

For top mount and bottom mount models, the coldest freezer setting is not recommended in normal or very hot climates. It will limit the cooling to the refrigerator section.

In very cold climates (where temperatures are below 10°C) the freezer may need to be set colder.

Single Door All Refrigerator Models
Set the temperature with the temperature control at the rear of the compartment. Set refrigerator control to MID at start-up.

- Adjusting the all refrigerator temperature:
  1. Turn clockwise to set colder.
  2. Turn anti-clockwise to set less cold.

Single Door All Freezer Models
Use the temperature control at the top of the compartment. Set freezer control to MID at start-up.

- Adjusting the vertical freezer temperature:
  1. Turn clockwise to set colder.
  2. Turn anti-clockwise to set less cold.

TIPS & INFORMATION
The thermostat in the temperature control is affected by altitude. It’s recommended you set it warmer to compensate – eg. at 1000 metres above sea level, set the temperature control to one setting warmer than MID.

Checking the softness of ice cream is a good way to check the temperature of the freezer. Also, checking the temperature of water is a good way to check the temperature of the food storage compartment.
THIS SECTION TELLS YOU HOW TO MAKE THE MOST OF THE MANY USEFUL FEATURES - CLEANING INSTRUCTIONS CAN BE FOUND ON PAGE 16.

DOOR STORAGE BINS
The top mount models, bottom mount freezer models and all refrigerator models are fitted with door storage bins. These bins adjust to meet different storage needs. All the door bins are completely removable for cleaning. If you want to remove or adjust a bin, lift it over the support lugs on the inner door panel. To replace, push the bin down over the support lugs to lock it in place.

DAIRY COMPARTMENT
Use the dairy compartment to store foods like butter, margarine and cheeses. The compartment is slightly warmer than the rest of the refrigerator compartment, while the lid provides protection against odours.

DELI BIN (WHERE FITTED)
Use the deli bin to store foods like smallgoods, fresh or cooked meat and cheese, or as an additional crisper. The bin will prevent strong food odours from creeping into the rest of the refrigerator. To remove the deli bin, pull it forward, then lift it up and pull it further forward.

CRISPER BIN
Use the crisper bin to store vegetables, fruit or smallgoods. Change the humidity by sliding the humidity control.

STORING VEGETABLES
Store vegetables in the crisper bin and remember to set the humidity control to more humid (closed).

STORING FRUIT & SMALLGOODS
Store fruit and smallgoods in the crisper bin and remember to set the humidity control to less humid (open).

REMOTION (STANDARD CRISPER BINS)
1. Empty food from the drawer.
2. Remove the crisper bin(s) by pulling forward, then up and forward again.
3. Remove the crisper shelf by lifting the catches on the underside of the shelf and pulling the shelf forward.

REMOTION (ON TELESCOPIC EXTENSION SLIDES)
1. Remove the crisper bin(s) by pulling forward, then up and forward again, lifting the bin off the slides. Push the slides back into the refrigerator.

WARNING
Never close the door while the telescopic slides are extended. It may damage the slide and/or the refrigerator or cause the slide to become disengaged from the refrigerator.

CAUTION
To clean a crisper cover with telescopic extension slides, simply wipe with a damp cloth and warm soapy water. Never immerse the cover in water, as this could affect the operation of the slide.

To refit
1. With the runners pushed in all the way.
2. Slide the bin into place over the telescopic slides and under the shelf. Push the bin in until it stops, noting that the bin will not be closed all the way.
3. Open the bin to access the finger tabs at the ends on each side of the bin. Use your thumb and forefinger to lift the bin over the end of the slide and clip in place.
4. Fully close the bin.

STORESAFE™ LOCKABLE BINS (WHERE FITTED)
These bins are designed to store items like cosmetics and medicines. They slide out for easy access. The left hand bin has a lock that is operated by turning the knob located on the fixed area between the bins. This may be turned with a coin. You can remove the Storesafe™ bin(s) for cleaning. Remove the bin by simply pulling past the stop in the runners. You will need to lift the bin while pulling it forward. A small amount of force may be required to overcome the front stop.

CAUTION
Never store solvents or flammable materials like nail polish remover or lighter fluid inside your refrigerator. They will affect the life of the plastic components and may taint stored food.
To replace the drawer,
1. With the telescopic slides pushed in all the way.
2. Slide the drawer into place over the slides and push the bin in until it stops. The bin will not be closed all the way.
3. Open the bin to access the finger tabs at the ends of the telescopic slides, on each side of the bin. Using your thumb and forefinger, lift the bin over the end of the slide and clip in place. If the drawer is not fully engaged on the slide, it’s possible the drawer won’t stay on the slide if fully extended.
4. Fully close the bin.

When replacing the drawers after cleaning, we recommend fitting the lower drawer first.

WARNING
Never close the door while the telescopic slides are extended. This may damage the slide and/or refrigerator or cause the slide to become disengaged from the refrigerator.
TWIST ICE & SERVE

Some top mount, bottom mount and single door vertical freezer models have a twist ice & serve ice cube tray assembly. To use, remove the tray, fill with water and place back in the freezer. Once ice has formed (approximately 3 hours) simply twist the knob at the front clockwise until the ice drops into the bin below. A larger bin is provided in some bottom mount models along with an ice scoop.

Mounting the Twist Serve to the Other Side of the Freezer.

Note: this is only possible on Top Mount models.
1. Remove the ice bin and ice cube tray. If the ice tray assembly is frozen to the carriage, simply squeeze the tray and shelf together to break the ice.
2. Before you remove the ice carriage, remember to disengage it from the glass shelf (as shown), as it may result in damage to the assembly.
3. Remove the centre runner by disengaging it at the front of the shelf, and removing it from the rear.
4. Refit the runner in to the rear of the shelf on the right hand side and then engage the front (as shown).
5. Fit the carriage by sliding it into the runners until the front of the carriage engages with the shelf.
6. Refit the ice tray and ice bin.

CHANGING THE LIGHT BULB

Refrigerator Light
1. Switch off the power at the power point and remove the cord by pulling the plug.
2. Carefully unclip the light cover by pulling the light cover tab at the rear, towards you.
3. Unscrew the light bulb and replace it with a new bulb of the same type and wattage. If, when you remove the light bulb the small rubber “O” ring comes out with the bulb, fit the “O” ring over the new bulb and screw bulb into the socket (see diagram at bottom of page).

**Warning**

Never insert your finger into the light bulb socket to check for the presence of the “O” ring.
4. Replace the light cover by hooking the lugs into the front of the housing and pressing the rear of the cover up until it clips in.
5. Wait 5 minutes to ensure pressures in the refrigeration system are equalised, before turning the refrigerator on at the power point.

Freezer light (where fitted)
1. Switch off the power at the power point and remove the cord by pulling the plug.
2. Carefully unclip the light cover by pulling the light cover tab at the rear, towards you.
3. Unscrew the light bulb and replace it with a new one of the same type and wattage. If, when you remove the light bulb the small rubber “O” ring comes out with the bulb, fit the “O” ring over the new bulb and screw bulb into the socket (see diagram at bottom of page).

**Warning**

Never insert your finger into the light bulb socket to check for the presence of the “O” ring.
4. Replace the light cover by hooking the light cover lugs into the front of the housing and pressing the rear of the cover up until it clips in.
5. Wait 5 minutes to ensure pressures in the refrigeration system are equalised before turning the refrigerator on at the power point.

TIPS & INFORMATION

Ensure the ‘O’ ring is in place before replacing the bulb.
**CLEANING THE REFRIGERATOR**

**WARNING**

BEFORE CLEANING: Turn the refrigerator off at the power point and unplug the cord to prevent any chance of electrocuting yourself.

- **Doors and exterior (white & pacific silver)**
  You should only clean the doors with lukewarm soapy water and a soft cloth.

- **Stainless Steel**
  Your stainless steel refrigerator is manufactured from mark-resistant stainless steel. This stainless steel has a special advanced protective coating that eases the removal of marks such as fingerprints and water spots. To keep its appearance, clean it regularly with lukewarm soapy water and a soft cloth.

**CAUTION**

Never use stainless steel cleaners, abrasive pads or other cleaners that will scratch the surface. Damage to the appliance after delivery is not covered by your warranty.

- **Interior**
  Clean the inside of your refrigerator regularly with a soft cloth, unscented mild soap and lukewarm water. Thoroughly dry all surfaces and removable parts and avoid getting water on the controls. Replace removable parts, plug power cord in and switch the power on before returning the food.

- **Door seals**
  Always keep door seals clean by washing them with a mild detergent and warm water, followed by a thorough drying. Sticky food and drink can cause seals to stick to the cabinet and tear when you open the door.

**CAUTION**

Never use hot water, solvents, commercial kitchen cleaners, aerosol cleaners, metal polishes, caustic or abrasive cleaners, or scourers to clean your refrigerator. Many commercially available cleaning products and detergents contain solvents that will damage your refrigerator. Use only a soft cloth with an unscented mild soap and lukewarm water.

If your refrigerator has telescopic extension slides, simply wipe them with a damp cloth to clean them and never immerse them in water.

**SAFETY**

It is important to use your appliance safely. This means you need to supervise young children and infirm persons when they use it. You need to make sure that young children do not play with the appliance. Follow the tips below.

**ALWAYS DO THIS**

1. Check the power point is properly earthed – if you are not sure get an electrician to check it.
2. Switch off and unplug the refrigerator at the power point before you clean or move it.
3. If the power supply cord is damaged, have it replaced by the manufacturer, service agent or similarly qualified person.

**NEVER DO THIS**

- Never let children play with the refrigerator.
- Never store spray cans, explosive fluids or flammable liquids in the refrigerator.
- Never store fizzy drinks in the freezer compartment.
- Never lick icy foods when they first come out of the freezer. This can burn your your lips and mouth.
- Never try to repair the refrigerator yourself.
- Never use electric heaters or dryers to defrost the freezer because you can receive an electric shock.
- Never use electrical appliances inside the food storage areas.
- This appliance contains insulation formed with flammable blowing gases. For safety reasons, take care when you dispose of it.
- Do not damage the appliance circuit.

**WARNING**

When you dispose of your old refrigerator or freezer, remove any doors to prevent children from being trapped inside.

**WARNING**

**R600a REFRIGERANT WARNING**

This appliance contains a small quantity of environmentally friendly, but flammable, non-synthetic R600a refrigerant:

- Ensure that the tubing of the refrigerant circuit is not damaged during transportation and installation.
- Leaking refrigerant may cause eye injuries or ignite.
- The room for installing appliance must be at least 1 m² per 8g of refrigerant. The amount of refrigerant in the appliance can be found on the rating plate inside the appliance.

**SWITCHING OFF YOUR REFRIGERATOR**

If you switch your refrigerator for an extended period, follow these steps to reduce the chances of mould:

1. Remove all food.
2. Remove the power plug from the power point.
3. Thoroughly clean and dry the interior.
4. Ensure that all the doors are wedged open slightly for air circulation.

</table>
| Refrigerator is not operating | • Check that the power cord is plugged into the power outlet properly and that the outlet is switched ‘ON’.  
• Try running another appliance from the power outlet. If no power is coming from the outlet you may have blown a fuse or tripped a circuit of your household power supply.  
• Try adjusting the temperature control to a slightly “colder” position.  
• It is normal for the freezer fan NOT to operate during the automatic defrost cycle, or for a short time after the appliance is switched on. |
| When there is refrigerator/freezer noise | Modern refrigerators/freezers with increased storage capacity use high speed compressors. These can provide a seemingly high level of sound which is quite normal. Normal operational sounds include:  
• Occasional gurgling, similar to water boiling.  
• Air flow noise (air circulates because of a small fan).  
• A popping noise heard during automatic defrost.  
• A clicking noise heard just before the compressor starts (this is just the automatic switching action of the temperature control, turning the compressor on or off).  
Other strange sounds may mean that you need to check and take action. For example, noises may mean that:  
• The cabinet is not level.  
• The floor is uneven or weak.  
• Bottles are badly placed and rattling.  
• There are vibrations from an object on top of or behind or beside the refrigerator.  
• The back of the refrigerator cabinet is touching the wall.  
Remember it is quite normal for noise to seem louder just after the refrigerator starts operating. |
| If there are odours inside the refrigerator | • The interior may need cleaning.  
• Some foods produce odours.  
• Some containers and wrapping can cause odours.  
• Ask yourself if the odour started about the same time you started storing something unusual. |
| When the motor seems to run more than expected | Your new refrigerator has a large fridge and freezer section to keep cool. So it is normal to frequently hear the sound of the motor. However, to keep operation to a minimum check the following:  
• Are doors kept open too long or too often?  
• Are controls set too cold? See ‘Controlling the temperature’ on pages 10 – 12.  
• Have large amounts of warm food just recently been stored? Summer, festive seasons and holidays usually mean a lot more work for your refrigerator.  
If the day is hot or the room is very warm, the refrigerator will need to run more than normal.  
• The refrigerator will run more that normal just after you install it or when it has been turned off for a long time. |
| If the temperature in the refrigerator is too warm | • Check that the appliance has enough clearance at the sides, back and top. Refer to the installation instructions on page 8 .  
• Refer to ‘Controlling the temperature’ on pages 10 – 12 .  
• You may have kept the door open too long or too frequently.  
• Food containers or packaging may be holding a door open.  
If the temperature in the refrigerator is too cold | Refer to ‘Controlling the temperature’ on pages 10 – 12 .  
• Increase the temperature to avoid high energy consumption.  
If heavy frosting occurs in the freezer | Make sure you fully close the freezer and fridge doors. If the doors are left open, a heavy frost will coat the inside of the freezer. If a frost develops, remove it and take care to properly close the doors.  
If water drips on the floor | The defrost water tray, located at the back or underneath of the cabinet, may not be properly positioned, or the drain tube may not be properly positioned to direct water into this tray. You may need to pull the refrigerator away from the wall to check the tray and tube.  
Fridge does not exit vacation mode | Turn appliance off at the power point. Leave off for three (3) minutes for the memory to clear, then turn back on. |

**IF YOU STILL REQUIRE SERVICE**

If you have a problem, and the problem persists after you have made the checks mentioned above, contact your nearest approved Service Centre or the dealer you bought the refrigerator from. Be ready to quote the model number, 9-digit PNC and 8-digit serial number, which is stated on the label inside the refrigerator compartment.
This document sets out the terms and conditions of product warranties for Electrolux branded appliances. It is an important document. Please keep it with your proof of purchase documents in a safe place for future reference should you require service for your Electrolux appliance.

General Terms and Conditions

1. In this warranty
   (a) ‘Electrolux’ means Electrolux Home Products Pty Ltd ABN 51 004 762 341
   In respect of Appliances purchased in Australia and Electrolux (NZ) Limited in respect of Appliances purchased in New Zealand;
   (b) ‘Appliance’ means any Electrolux product purchased by you accompanied by this document;
   (c) ‘Warranty Period’ means
      (i) where you use the Appliance for personal, domestic or household purposes in Australia the period of ‘24’ months and in New Zealand the period of ‘24’ months;
      (ii) where you use the Appliance for commercial purposes, in Australia the period of ‘3’ months and in New Zealand the period of ‘3’ months, (if the period stated is 0 months you are not covered by this product warranty) following the date of original purchase of the Appliance;
   (d) ‘you’ means the purchaser of the Appliance not having purchased the appliance for re-sale, and ‘your’ has a corresponding meaning.

2. This warranty only applies to Appliances purchased and used in Australia or New Zealand and is in addition to (and does not exclude, restrict, or modify in any way) any non-excludable statutory warranties in Australia or New Zealand.

3. Electrolux warrants that, when dispatched from an Electrolux warehouse, the Appliance is free from defects in materials and workmanship for the Warranty Period.

4. During the Warranty Period Electrolux or its Authorised Service Centre will, at no cost. For information about whether you are within an Electrolux service area, travelling costs for representatives of the Authorised Service Centre to and from your home or business. If you are outside an Electrolux service area, you will bear these costs.

5. Parts and Appliances not supplied by Electrolux are not covered by this warranty.

6. Where you are within an Electrolux service area, this warranty covers the cost of transport of the Appliance to and from Authorised Service Centres of Electrolux and travelling costs for representatives of the Authorised Service Centre to and from your home or business. If you are outside an Electrolux service area, you will bear these costs. For information about whether you are within an Electrolux service area, please phone 13 13 49 in Australia, or 0800 10 66 10 in New Zealand.

7. Proof of purchase is required before you can make a claim under this warranty.

8. You may not make a claim under this warranty unless the defect claimed is due to faulty or defective parts or workmanship. Electrolux is not liable in the following situations (which are not exhaustive):
   (a) The Appliance is damaged by:
      (i) accident
      (ii) misuse or abuse, including failure to properly maintain or service
      (iii) normal wear and tear
      (iv) power surges, electrical storm damage or incorrect power supply
      (v) incomplete or improper installation
      (vi) insect or vermin infestation.
   (b) The Appliance is modified without authority from Electrolux in writing.
   (c) The Appliance’s serial number or warranty seal has been removed or defaced.
   (d) The Appliance was serviced or repaired by anyone other than Electrolux or its Authorised Service Centres.

9. This warranty, the contract to which it relates and the relationship between you and Electrolux are governed by the law applicable in the Australian State where the Appliance was purchased or the law applicable in New Zealand if the Appliance was purchased in New Zealand. Where the Appliance was purchased in New Zealand for business purposes the Consumer Guarantee Act does not apply.

Limitation of Liability

10. To the extent permitted by law:
   (a) Electrolux excludes all warranties other than as contained in this document;
   (b) Electrolux shall not be liable for any loss or damage whether direct or indirect or consequential arising from your purchase, use or non-use of the Appliance.

11. Provisions of the Trade Practices Act and State consumer legislation in Australia, and the Consumer Guarantees Act, the Sale of Goods Act and the Fair Trading Act in New Zealand, imply warranties or conditions, or impose obligations, upon Electrolux which cannot be excluded, restricted or modified. To the extent permitted by law, the liability of Electrolux (if any) arising out of or in relation to the Appliance or any services supplied by Electrolux shall be limited (where it is fair and reasonable to do so):-
   (a) in the case of Appliances, at its option, to the replacement or repair of the Appliances or the supply of equivalent products or the payment of the cost of replacing the Appliances or having the Appliances repaired or of acquiring equivalent Appliances. Upon being replaced, parts and Appliances become the property of Electrolux; or
   (b) in the case of services, at its option, to the supply of the services again or the payment of the cost of having the services re-supplied; and in the case of Appliances or services supplied in New Zealand, loss or damage whether direct or indirect or consequential that is reasonably foreseeable.

Privacy

You acknowledge that in the event that you make a warranty claim it will be necessary for Electrolux and its Authorised Service Centres to exchange information in relation to your use of Electrolux to enable Electrolux to meet its obligations under this warranty.

EXTENDED WARRANTIES AND INDEMNITY

Sealed Refrigeration System Warranty

For a further period of three years following the expiry of the Warranty period, Electrolux or its agent will supply replacements for, or at the sole option of Electrolux, repair, all parts it finds defective in the Sealed Refrigeration System which comprises: compressor, condenser, evaporator, dryer and tubing. During this three year period you will pay for the costs of labour (including any call out or service fees), and freight if necessary in replacing defective parts in the Sealed Refrigeration System. You will pay for the costs of transport of the Appliance if further service is required and the costs of parts or repairs to parts other than those included in the Sealed Refrigeration System.

Frozen Food indemnity

Subject to the following exclusions, Electrolux will indemnify you for a period of 24 months from the date of purchase of the Appliance against any loss or damage to frozen foodstuffs due to a Sealed Refrigeration System breakdown. This indemnity will be limited to:
   (a) in the case of freezers with a capacity of less than 400 litres – AU$150
   (b) in the case of freezers with a capacity of 400 litres or more – AU$300

   This indemnity does not cover loss or damage to frozen foodstuffs occasioned by:
   (a) failure to plug in the freezer to a properly connected power supply or failure to switch on the power point
   (b) accidental removal of the plug from the power point or switching off the power supply;
   (c) failure to keep the door or lid of the freezer closed
   (d) the introduction of abnormal heat loads to the freezer;
   (e) failure to observe the operating and installation instructions supplied with the freezer; and
   (f) failure to defrost the freezer at recommended intervals on chest freezers or non frost free models

Important Notice

Before Calling a Service Technician please check carefully the operating instructions, service booklet and the warranty terms and conditions.
